

4 Channel Amplifier / 2 Speaker - Setup utilizing BRIDGED Cicada DSP125.4D Amplifier - FAIRING ONLY SYSTEM

6.5" Front speakers (CH65.4 - CoAx Horn)

A very typical and simple setup using just the front speaker channels out of the stock HD radio into the amplifier. NOTE: On 2017 and up HD's you will need to "load" the HD radios speaker outputs with 47 ohm / 5 watt resistors for it to properly work. The DSP125.4D amplifier comes with Molex RCA input harness and bare wire output (on Molex's) BUT for this system you need SPECIAL "Y- Adaptors" (Qty 2) that we make for signal input. HDFiMY's. As this is a 4 channel Amplifier running BRIDGED/2 channel output (BIG power!!) The more ambitious installer or home DIY'er can research, locate and order all the appropriate wiring and connectors.

OR

HARNESSES NEEDED FOR THIS INSTALL

FRONT INPUT Y-ADAPTOR WITH HD MOLEX[®]
Part# HDFiMY WITH 47OHM RESISTOR

(YOU WILL NEED 2 OF THESE TO CREATE A LEFT & RIGHT BRIDGED OUTPUT)

NOTE:BRIDGED WIRING!

Part# HDPG8K

6 FT POWER /GROUND WITH WATERPROOF FUSE HOLDER

FRONT SPEAKER OUTPUT
WITH HD MOLEX[®]
Part# HDFoM

USING THE STOCK DSP125.4D SPEAKER OUTPUT HARNESS AND THE HDFoM (1)
CUT THE MOLEX'S OFF THE HDFoM AND USE ONE FOR THE LEFT AND ONE FOR
THE RIGHT SPEAKER OUTPUT TO PLUG INTO THE STOCK HD SPEAKER WIRING

Part# HDFiMY OPTIONAL : (2 REQUIRED)
FRONT INPUT Y ADAPTOR WITH HD MOLEX®
WITH 47 OHM RESISTOR

Stock HD radio and wiring used!
(2 Channel out/Stereo)
No need to cut anything!

STOCK HD RADIO

NOTE: This system CANNOT FADE ..PERIOD!! You're bridging
a 4 channel amplifier and making it a BIG 2 channel

IN FAIRING

CH65.4 (4 ohm - 6.5" CoAx Horns)

NOTE: Modify the HDRoM
Harness and use one of the stock
Speaker output harnesses that
came with the DSP125.4D
to "BRIDGE" the DSP125.4D

Bottom wires on the MOLEX
are the ONLY wires that
give you a BRIDGED output

(YOU'VE BEEN TOLD THIS
TWICE NOW...SO
GET IT TOGETHER!!
BOTTOM WIRES = BRIDGED)

INPUT SIDE
DSP125.4D AMPLIFIER

1.375" / 34.9mm

INPUT SIDE
DSP125.4D
AMPLIFIER

Part# HDFoM OPTIONAL:
FRONT SPEAKER OUTPUT
WITH HD MOLEX®

OUTPUT SIDE DSP125.4D
AMPLIFIER

Part# HDRoM OPTIONAL:
REAR SPEAKER OUTPUT 6 FT
EXTENSION WITH MOLEX®

BRIDGING 4 CHANNEL AMPLIFIER

CH1/2 ARE NOW "BRIDGED"
CREATING **LEFT** CHANNEL

CH1 - CH2 + CH3 - CH4 +

CH3/4 ARE NOW "BRIDGED"
CREATING **RIGHT** CHANNEL

AMPLIFIERS IN FAIRING

THIS SYSTEM IS SPECIAL AS IT IS 2 - DSP125.4D AMPLIFIERS BRIDGED MONO /STEREO
THERE IS A LOT OF POWER TO DEAL WITH AND GETTING INPUT/ OUTPUT CORRECT IS SUPER IMPORTANT

This is the start page and comes up only for a few seconds. The most important thing here is to know which version you have and make sure it is the most current version

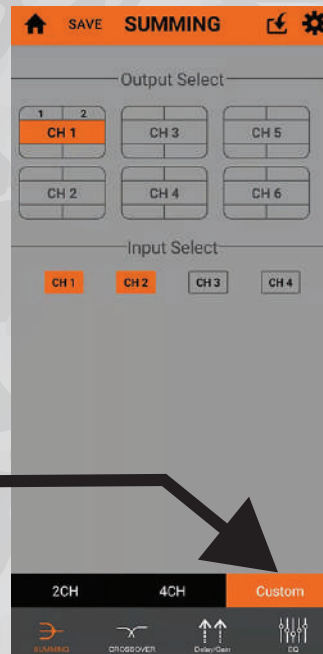

STARTPAGE

First thing to do is select what INPUT you are doing? 2 channel? Or 4 channel?

Select that and move to "Delay/Gain" page

NOTE: Once you select 2 channel (for example)
NOTICE how all channel "INPUTS" are paralalled
Makes life easy!!

Most important thing to do on this page is to "preset" the gains of each output channel - BEFORE you power up the system!!
NOTE: ALL channel gains are set at -6dB
This keeps you from blowing up your speakers!
YOU CAN CHANGE LATER!

IMPORTANT!

NOTE: Channels are linked" making it easier to set gains, ALL at one time! Cool,easy feature ..make sure to use it!!

NOTE: MASTER GAIN IS @ -6dB

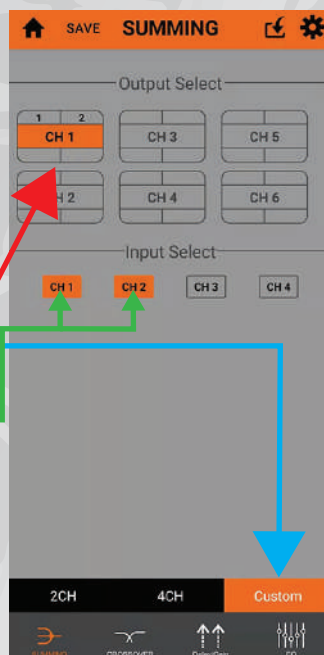

NOTE: On this system how you set up the input is EVERYTHING! You must sum CH 1 and 2 to get a bridged LEFT channel
You MUST SUM CH3/4 to get a bridged RIGHT channel. The cool thing with the Cicada DSP125.4D is that is all you have to do! NO "Y Adaptors" No one does that but CICADA!!! (thank you...thank you very much!)

2ND - Click CH1

3RD - Click Input Select CH1/CH2

LEFT channel is now summed and the speaker output can be bridged **TOO easy!!**

1ST - Click "Custom"

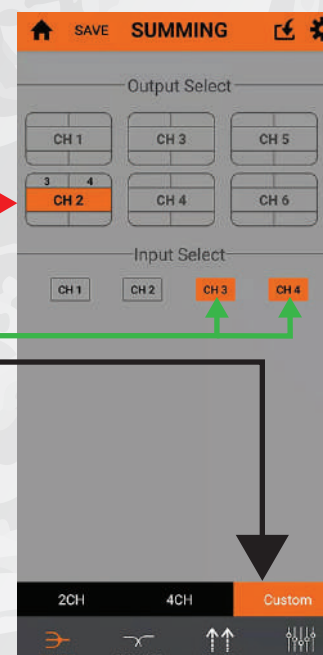

NOTE: You must ALSO sum CH 3 and 4 to get a bridged RIGHT channel. Since you need STEREO. Again NO "Y Adaptors"

1ST - Click "Custom"

2ND - Click CH2

3RD - Click Input Select CH3/CH3

RIGHT channel is now summed and the speaker output can be bridged

IT'S ONLY 5 PAGES YOU HAVE TO DEAL WITH!! ...BUT THIS IS WHERE ALL THE MAGIC HAPPENS.
THIS IS THE MOST IMPORTANT PART OF THIS AMPLIFIER! EVERYTHING HAPPENS HERE

This is the start page and comes up only for a few seconds. The most important thing here is to know which version you have and make sure it is the most current version

STARTPAGE

First thing to do is select what INPUT you are doing? 2 channel? Or 4 channel?

Select that and move to "Delay/Gain" page

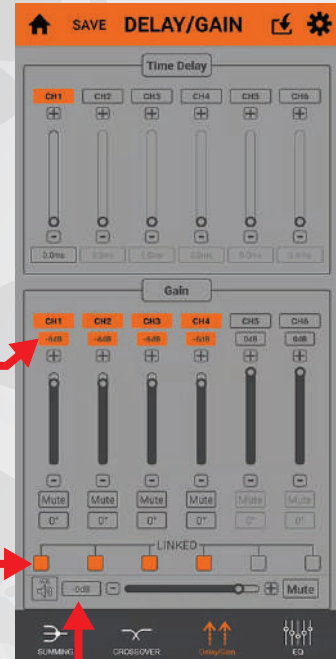

NOTE: Once you select 2 channel (for example) NOTICE how all channel "INPUTS" are paralled Makes life easy!!

Most important thing to do on this page is to "preset" the gains of each output channel - BEFORE you power up the system!!
NOTE: ALL channel gains are set at -6dB
This keeps you from blowing up your speakers!
YOU CAN CHANGE LATER!

IMPORTANT!

NOTE: Channels are linked" making it easier to set gains, ALL at one time! Cool,easy feature ..make sure to use it!!

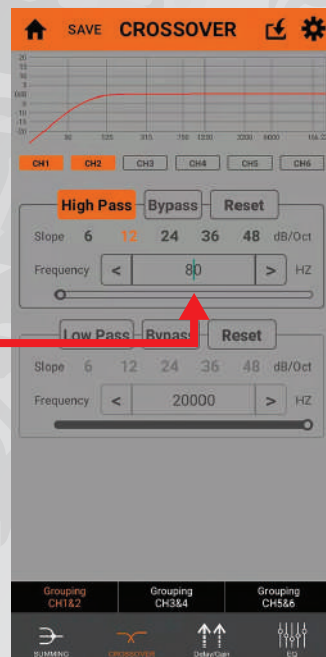

NOTE: MASTER GAIN IS @ -6dB

This is FRONT Speaker CROSSOVER page. Here you MUST high pass all "full range" speakers. Since, in reality, NO 6.5 inch speaker is TRULY "full range". At low levels? Yes(at LOW levels). At the levels YOU want to play at? NO WAY! To the right we are "High Pass"ing the 6.5" speakers.

Notice the frequency.

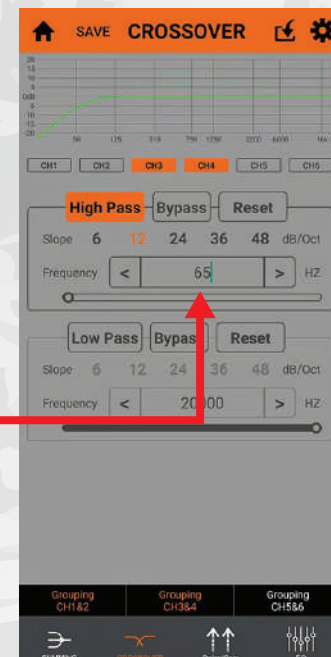

This is as LOW as you want to "High Pass" ANY "Pro Style" 6.5" speaker. No matter what JIVE BS they tell you! REMEMBER...there is Physics at play here..

No Fairies, Pixie Dust or Unicorns.

This is the CROSSOVER page. Here you MUST high pass all "full range" speakers. This is the rear "BAG" and a 6" X 9" Pro Style Speaker. Even though it is a 6" X 9" and MORE FULL range than a 6.5". You still will have issues with trying to get REAL low fre quencies out of your bike. And at the levels YOU want to play at? NO WAY!!! To the right we are "High Pass"ing The 6" X 9"speakers, Notice the frequency.

This is as LOW as you want to "High Pass" ANY "Pro Style" 6"X 9" speaker. No matter what JIVE BS they tell you! REMEMBER...there is Physics at play here..

This is all about EQ initial setup and using the “PreSets” we’ve designed to solve “Flashing” issues

This is EQ (equalizer) page. On this page you can select which channel you are going to EQ. At the bottom of the page there are “Grouping” buttons. You can Group just CH1&2, OR Group CH3&4, OR CH5&6. Or even Group ALL channels CH1/CH2/CH3/CH4/CH5/CH6. Whatever you need to do to help you speed up setup/tuning. Lets start off with grouping CH1/2 (typically on a HD this is the Front Fairing speakers- usually 6.5 inch speakers) These are “Grouped” for initial the EQ settings (that change as you go on!) There is something important to take into consideration. Is your HD 2014-18 Flashed? Or not “Flashed”! This is a SUPER important piece of information. If you do not know what this means there is a page on our website that goes thru all of this as it is WAY beyond the scope of this System Design Set-Up sheet to go into depth on. For the rest of this setup we are going to ASSUME you understand what “Flashing” is and what it effects. With the DSP125.4D we have built-in “Presets” that overcome the crazy EQ that HD has built into their stock radios. IF you do NOT want to “Flash” your computer on your bike (typically an additional \$100-200!!) you don’t need to! At least...not if you have a DSP125.4D amplifier / Processor.

Select a Preset and go from there.

NOTE: Remember that these presets are NOT the End All.. Cure All !!

You’ll still need to EQ the system out. All these presets do is get you closer to flat BEFORE you add your pinch of salt (EQ lingo for your preference!)

**MAKE SURE TO SAVE THESE SETTINGS...
BEFORE POWERING UP YOUR SYSTEM**

**Audio Preset
Select**

This page is where you select what year bike you have and what speaker system. It REALLY makes a difference as we not ONLY flatten the CRAZY HD radio EQ, but we have added a little EQ of our own (since we’ve done this for just a couple days - like...40 yrs!) We’ve picked the most common system (CoAX Horns) and have EQ’d (DE-EQ’d?) the stock HD “Boom” EQ curve OUT and added a little pinch of our own “Special” salt EQ (Himalayan??) ONLY select these Presets if you KNOW that your bike has not been “Flashed” already.

**WARNING!!- NOT HAVING YOUR BIKE
“FLASHED” OR USING ONE OF OUR
PRESETS CAN RESULT IN YOU BLOWING
UP YOUR BRAND NEW SPEAKERS!!!**

TYPICAL EQ COMING OUT OF STOCK HD RADIOS

**..... Factory Harley-Davidson® Boom!™ EQ Curve
— Flattened EQ with DSP AMP Software Preset**
